Preface	VII
1 Introduction to Injection Molding	1
<i>Shia-Chung Chen</i>	
1.1 Injection Molding and Molding Machines	1
1.1.1 Brief Overview of an Injection Molding Machine	3
1.1.2 Machine Setup for Process Conditions	4
1.1.2.1 Injection Pressure	4
1.1.2.2 Melt Temperature	5
1.1.2.3 Injection Speed	5
1.1.2.4 Mold Temperature	6
1.1.2.5 Other Parameters	7
1.2 Characterization of the Injection Molding Process	7
1.2.1 Injection Cycle	7
1.2.2 Mold Filling Stage	7
1.2.2.1 Process Overview	7
1.2.2.2 Flow Velocity and Melt Front Advancement	8
1.2.2.3 Pressure Variation and Distribution	9
1.2.2.4 Melt Temperature Variation and Distribution	10
1.2.2.5 Shear Stress and Shear Rate	12
1.2.3 Mold Packing/Holding Process	12
1.2.3.1 Process Overview	12
1.2.3.2 Packing Pressure Variation and Distribution	13
1.2.3.3 Packing Time	13
1.2.4 Mold Cooling Process	14
1.2.4.1 Process Overview	14
1.2.4.2 Coolant Temperature/Mold Temperature	14
1.2.4.3 Cooling Time/Ejection Temperature	15
1.2.4.4 Melt Temperature Distribution	15

1.3	Influence on Part Properties/Qualities	15
1.3.1	Effect of Processing Conditions on Part Properties	15
1.3.2	pvT Path and Thermal-Mechanical History	16
1.3.3	Shrinkage	17
1.3.4	Molecular Orientation/Fiber Orientation	17
1.3.5	Residual Stress	19
1.3.6	Warpage	21
1.3.7	Other Property/Quality Concerns	23
2	Intelligent Control of the Injection Molding Process	25
	<i>Yi Yang and Furong Gao</i>	
2.1	Introduction of Injection Molding Machine Control	25
2.2	Feedback Control Algorithms: Adaptive Control	27
2.2.1	Model Estimation	29
2.2.2	Model Predictive Control (MPC): Generalized Model Control (GPC)	30
2.2.2.1	Basic Principle of MPC and GPC	30
2.2.2.2	Parameter Tuning	33
2.2.2.3	Adaptive GPC Results	34
2.2.2.4	Adaptive GPC with Different Conditions	36
2.3	Fuzzy System in Injection Molding Control	37
2.3.1	Fuzzy Inference System Background	37
2.3.2	Fuzzy V/P Switchover	38
2.3.3	Fuzzy V/P System Experimental Test	43
2.3.4	Further Improvement	44
2.4	Learning Type Control for Injection Molding	48
2.4.1	Learning Type Control Background	48
2.4.2	PID-Type ILC	50
2.4.3	Time-Delay Consideration	51
2.4.4	P-Type ILC for Injection Velocity	52
2.4.5	P-Type ILC for Packing Pressure	54
2.5	Two-Dimensional Control Algorithm	55
2.5.1	Two-Dimensional Control Background	55
2.5.2	Two-Dimensional Dynamic Matrix Control	59
2.5.2.1	Problem Formulation	59
2.5.2.2	Controller Design	60
2.5.2.2.1	2D Equivalent Model with Repetitive Nature ..	60
2.5.2.2.2	2D Prediction Model	61
2.5.2.2.3	Cost Function and Control Law	62
2.5.2.2.4	2D-DMC Design Procedure	64
2.5.2.3	Analysis of Convergence and Robustness	65

2.5.3	Simulation Illustration	73
2.5.3.1	Case 1: Convergence Test	75
2.5.3.2	Case 2: Repetitive Disturbances	78
2.5.3.3	Case 3: Nonrepetitive Disturbances	80
2.5.4	Experimental Test of 2D-DMC	82
2.6	Summary and Perspectives	86
3	Water-Assisted Injection Molding	89
	<i>Shih-Jung Liu</i>	
3.1	Introduction	89
3.1.1	Molding Process	90
3.1.2	Advantages and Disadvantages	92
3.1.3	Water versus Gas	93
3.1.4	Molding Resins	94
3.2	Tooling	95
3.3	Process Parameters	97
3.3.1	Water Penetration Behavior in Molded Parts	97
3.3.2	Water Channel Geometry	99
3.3.3	Part Fingering	100
3.3.4	Unstable Water Penetrations	102
3.3.5	Molding of Fiber-Reinforced Materials	103
3.4	Morphology Development	105
3.5	Modeling and Simulation	108
3.6	Conclusions	112
4	Foam Injection Molding of Conductive-Filler/ Polymer Composites	115
	<i>Amir Ameli and Chul B. Park</i>	
4.1	Introduction	115
4.2	Conductive-Filler/Polymer Composites (CPCs)	116
4.3	Foam Injection Molding	119
4.4	Foam-Injection-Molded CPCs	120
4.4.1	Microstructure of CPC Foams	122
4.4.1.1	Fiber Interconnectivity	123
4.4.1.2	Fiber Orientation	124
4.4.1.3	Skin Layer	126
4.4.1.4	Fiber Breakage	127
4.4.2	Conductivity of CPC Foams	129
4.4.2.1	Through-Plane Conductivity	129

4.4.2.2	In-Plane Conductivity and Anisotropy	133
4.4.2.3	Uniformity of Conductivity	135
4.4.3	Impact of Processing Conditions on the Conductivity of CPC Foams	136
4.4.3.1	Degree of Foaming	136
4.4.3.2	Injection Flow Rate	142
4.4.3.3	Gas Content	144
4.4.3.4	Melt Temperature	145
4.5	Concluding Remarks	146
5	Water-Assisted Foaming: A New Improved Approach in Injection Molding	149
	<i>Rachmat Mulyana, Jose M. Castro, and L. James Lee</i>	
5.1	Introduction	149
5.2	Need for Water-Carrier Particles	151
5.2.1	Evaluation of Water-Carrier Particles	151
5.2.2	Pressurized Water inside the Pellet	156
5.2.3	Residual Water and Drying after Molding	157
5.2.4	Shell Life of Pressurized Pellets	158
5.3	Injection-Molding Analysis	162
5.3.1	Molds and Molding Parameters	162
5.3.2	Experimental Observations during the Filling Stage	163
5.3.3	Packing and Cooling Stage	166
5.4	Mechanical Properties	170
5.4.1	Mechanical Property Comparison at Minimum Cycle Time	170
5.4.2	Effect of Packing Time on Mechanical Properties	171
5.4.3	Effect of Water Level on Mechanical Properties	172
5.5	Warping and Surface Quality	173
5.5.1	Warpage Improvement	173
5.5.2	Flow Marks and Surface Quality	175
5.5.3	Hiding the Flow Marks Using In-Mold Coating	177
5.5.4	Method of Weight Saving	178
5.6	Accelerated-Aging Test	182
5.6.1	Effect of Water-Carrier Particles	182
5.6.2	Effect of Residual Water	183
5.7	Comparison with Supercritical Fluid Molding (SCF Molding)	184
5.7.1	Experimental Setup	185
5.7.2	Mechanical Property Comparison	188
5.7.3	Warpage and Surface Quality	189
5.8	Summary and Conclusion	191

6	Variable Mold Temperature Technologies	195
	<i>Shia-Chung Chen</i>	
6.1	Introduction	195
6.2	Various Methods for Dynamic Mold Temperature Control	197
6.3	Variable Mold Temperature Control with Embedded Internal Heat Sources	199
6.3.1	Hot Water Heating/Cold Water Cooling	199
6.3.2	Oil Heating/Water Cooling	199
6.3.3	Steam Heating/Water Cooling (RHCM)	200
6.3.4	Electrical Heater Heating	203
6.3.5	Pulse Cooling (Alternating Temperature Technology)	204
6.3.6	Electrical Heating at the Mold Surface Using a Two-Layer Coating	205
6.4	Mold Heating Based on Electromagnetic Induction Technology	206
6.4.1	Principle and Characteristics of Induction Heating	206
6.4.2	Induction Heating from Mold Surface (External Heating)	208
6.4.3	Induction Coil Design for Mold and Molding	209
6.4.4	The Challenges Facing EIHTC Applications and Their Possible Solutions	212
6.4.5	The Real Application of EIHTC - Mold Exterior Induction Heating	215
6.4.5.1	Elimination of a Weld Line and Floating Fiber Marks ...	215
6.4.5.2	Micro-Features Molding	216
6.4.6	Mold Exterior/Induction Heating by an Externally Wrapped Coil	217
6.4.7	Induction Heating from the Mold Interior Using Embedded Coils	220
6.4.8	Mold Interior/Proximity Effect Induced by Internal Current	224
6.5	Other Mold Surface Heating Technologies	227
6.5.1	Hot Gas-Assisted Heating	227
6.5.2	Infrared Heating	231
7	CAE for Advanced Injection Molding Technologies	235
	<i>Rong-Yeu Chang and Chao-Tsai (CT) Huang</i>	
7.1	Introduction	235
7.2	Multi-Component Molding	236
7.2.1	Introduction	236
7.2.2	Governing Equations	238
7.2.3	Case Study	240
7.2.4	Summary	248

7.3	Long-Fiber Microstructure Prediction	249
7.3.1	Introduction	249
7.3.2	Governing Equations	250
7.3.3	Case Study	252
7.3.4	Summary	256
7.4	Microcellular Injection Molding	256
7.4.1	Introduction	256
7.4.2	Governing Equations	257
7.4.3	Case Study	259
7.4.4	Summary	264
7.5	Gas-Assisted Injection Molding	265
7.5.1	Introduction	265
7.5.2	Governing Equations	266
7.5.3	Case Study	267
7.5.4	Summary	271
7.6	Advanced Hot Runner	271
7.6.1	Introduction	271
7.6.2	Governing Equations	272
7.6.3	Case Study	273
7.6.4	Summary	281
7.7	Conformal Cooling System	281
7.7.1	Introduction	281
7.7.2	Governing Equations	282
7.7.3	Case Study	282
7.7.4	Summary	289
7.8	Variotherm Molding Technologies	289
7.8.1	Introduction	289
7.8.2	Governing Equations	290
7.8.3	Case Study	290
7.8.4	Summary	300
7.9	Injection-Compression Molding	301
7.9.1	Introduction	301
7.9.2	Governing Equations	302
7.9.3	Case Study	302
7.9.4	Summary	313
7.10	Concluding Remarks	313
8	Injection Molding of Optical Products	317
	<i>Pei-Jen Wang</i>	
8.1	Introduction	317

8.2	Optical Qualities	318
8.3	Design Guidelines	321
8.4	Fundamentals of Optics	322
8.4.1	Snell's Law and Lens Images	323
8.4.2	Monochromatic Aberrations	324
8.4.3	Zernike Polynomials	327
8.4.4	Abbe Number	328
8.5	Material Properties	329
8.6	Mold Flow Analysis	331
8.7	Case Studies	338
8.7.1	The Lens and the Mold	338
8.7.2	CAE Simulation Process	339
8.7.3	Experimental Verification	343
8.8	Concluding Remarks	347
9	Microinjection Molding	349
	<i>Eusebio Cabrera, Jose M. Castro, Allen Y. Yi, and L. James Lee</i>	
9.1	Introduction	349
9.2	Issues in Molding Parts with Microfeatures	350
9.3	Influencing Factors in Microinjection Molding	354
9.4	Experimental and Numerical Studies of Injection Molding with Microfeatures	355
9.5	Developments in Microinjection-Molding Technology	363
9.6	Ultrathin Wall Case Study	368
9.7	Concluding Remarks	375
10	Mold Design/Manufacturing Navigation System with Knowledge Management	379
	<i>Wen-Ren Jong</i>	
10.1	Introduction	379
10.2	Knowledge Management	381
10.3	Four-Layer Architecture	393
10.4	Redevelopment	402
10.5	Stage Integration	410
10.6	Conclusions	417
	Index	419
