<b>List of Contributors</b> .....	<b>VII</b>
<b>Preface</b> .....	<b>IX</b>
<b>1 The Effect of Processing Conditions on the Dispersion and Microstructure of Organoclay/Polypropylene Nanocomposites in Twin-Screw Extrusion</b> .....	<b>1</b>
<i>Bruno Vergnes</i>	
1.1 Introduction .....	1
1.2 Experimental Techniques .....	2
1.2.1 Materials .....	2
1.2.2 Processing .....	3
1.2.3 Characterization .....	4
1.3 Influence of the Processing Conditions (Internal Mixer) .....	6
1.3.1 Influence of the Rotor Speed .....	6
1.3.2 Influence of the Mixing Time and the Temperature .....	7
1.3.3 Conclusions .....	9
1.4 Application to Twin-Screw Extrusion .....	10
1.4.1 Influence of the Processing Conditions on the Final Microstructure .....	10
1.4.1.1 Influence of the Screw Speed .....	10
1.4.1.2 Influence of the Feed Rate .....	11
1.4.1.3 Influence of the Barrel Temperature .....	12
1.4.1.4 Conclusions .....	14
1.4.2 Changes in the Microstructure along the Screws .....	15
1.4.3 Influence of the Screw Profile .....	18
1.4.4 How to Improve Dispersion and Exfoliation .....	20
1.5 Toward Process Optimization through Modeling and Prediction of Microstructures .....	23
1.6 Conclusions .....	26

<b>2</b>	<b>Ultrasound-assisted Processing of Nanocomposites</b> . . . . .	<b>29</b>
	<i>Avraam I. Isayev, Setareh Niknezhad, Jaesun Choi, and Jing Zhong</i>	
2.1	Introduction . . . . .	29
2.2	General Description of High-power Ultrasound . . . . .	31
2.3	Overview of High-power Ultrasonic Irradiation of Media . . . . .	33
2.3.1	Ultrasonic Cavitation in Liquid . . . . .	33
2.3.2	Overview of Ultrasonically-aided Processing of Polymer Nanocomposites . . . . .	34
2.3.3	Proposed Mechanism of Ultrasonic Irradiation of Polymer Nanocomposites . . . . .	40
2.4	Development of Ultrasonically-aided Processing Technology . . . . .	41
2.5	Effect of Ultrasound on Polymer Nanocomposites . . . . .	56
2.5.1	Nanocomposites Filled with Inorganic Filler Particles . . . . .	56
2.5.2	Nanocomposites Filled with Carbonaceous Fillers . . . . .	68
2.5.3	Mechanism of Ultrasonic Treatment in Polymer Nanocomposites . . . . .	84
2.6	Concluding Remarks . . . . .	85
<b>3</b>	<b>Monitoring Dispersion and Re-agglomeration Phenomena During the Manufacture of Polymer Nanocomposites</b> . . . . .	<b>97</b>
	<i>José A. Covas and Maria C. Paiva</i>	
3.1	Introduction . . . . .	97
3.2	Organoclays . . . . .	99
3.2.1	Dispersion of Layered Clays . . . . .	100
3.2.2	Monitoring the Development of Dispersion . . . . .	101
3.3	Carbon Nanotubes . . . . .	105
3.3.1	Dispersion of Carbon Nanotubes . . . . .	107
3.3.2	Monitoring the Development of Dispersion . . . . .	108
3.4	Graphene Derivatives . . . . .	112
3.4.1	Dispersion Mechanism . . . . .	113
3.4.2	Monitoring the Development of Dispersion . . . . .	115
3.5	Conclusions . . . . .	117

<b>4</b>	<b>The Effect of Dispersion and Particle–Matrix Interactions on the Fatigue Behavior of Novel Epoxy/Halloysite Nanocomposites</b> .....	<b>121</b>
	<i>Martin H. Kothmann, Agustin Rios de Anda, Andreas Köppel, Rico Zeiler, Georg Tauer, Zhong Zhang, and Volker Altstädt</i>	
4.1	Introduction .....	121
4.2	Materials and Processes .....	124
4.2.1	Materials .....	124
4.2.2	HNTs' Surface Modification .....	125
4.2.3	Preparation of Epoxy/HNT Nanocomposites .....	125
4.3	Characterization Methods .....	126
4.3.1	Thermal and Static Mechanical Analyses .....	126
4.3.2	Fatigue Crack Propagation Investigation .....	128
4.3.2.1	Analytical Approach .....	129
4.3.2.2	Experimental Procedure .....	130
4.4	Results and Discussion .....	131
4.4.1	Multiscale Material Characterization .....	131
4.4.1.1	Particle Morphology and Particle Size Distribution ...	131
4.4.1.2	Characterization of the HNTs' Modification .....	132
4.4.1.3	Dispersion of the HNTs .....	135
4.4.1.4	Influence of Surface Modification on Interface Chemistry .....	135
4.4.1.5	Glass Transition Temperature .....	136
4.4.2	Mechanical Properties .....	137
4.4.2.1	Influence of Dispersion and Interface on the Tensile Properties .....	137
4.4.2.2	Influence of Dispersion and Interface on the Fracture Toughness and Toughening Mechanisms ...	140
4.4.3	Fatigue Crack Propagation Behavior .....	143
4.4.3.1	Influence of HNT Content .....	144
4.4.3.2	Influence of HNT Surface Modification .....	146
4.4.3.3	Energy Dissipating Mechanisms .....	147
4.5	Conclusions .....	152
<b>5</b>	<b>Effect of Melt Processing on Multi-Walled Carbon Nanotube Length</b> .....	<b>157</b>
	<i>Brian Grady</i>	
5.1	Introduction .....	157
5.2	Measurement of Nanotube Length .....	160

5.3	Effect of Melt Processing on Nanotube Length .....	163
5.3.1	Mechanical Variables .....	163
5.3.2	Nanotube or Fluid Variables .....	165
5.3.3	Effect of Additives, Including Blending .....	166
5.4	Conclusions .....	168
<b>6</b>	<b>Microinjection Molding of Filler-Loaded Polymer Nanocomposites .....</b>	<b>171</b>
	<i>Shengtai Zhou, Andrew N. Hrymak, and Musa R. Kamal</i>	
6.1	Introduction .....	171
6.2	Processing of Polymer Nanocomposites .....	172
6.3	Microinjection Molding of Polymer Nanocomposites .....	173
6.3.1	General Characteristics of the Microinjection Molding Process and Products .....	173
6.3.2	Special Considerations in Microinjection Molding of Polymers and Polymer Nanocomposites .....	176
6.3.3	Typical Process-Structure Relationships of Microinjection Moldings of Polymers and Polymer Nanocomposites .....	178
6.4	Thermal Properties .....	180
6.4.1	Melting and Crystallization Behavior .....	180
6.4.2	Thermal Stability .....	183
6.5	Mechanical Properties .....	184
6.5.1	Tensile Properties .....	185
6.5.2	Nanoindentation .....	186
6.5.3	Dimensional Stability .....	187
6.6	Electrical Properties .....	189
6.6.1	The Effect of Filler Type .....	189
6.6.2	The Effect of the Polymer Matrix .....	193
6.6.3	The Effect of Surface Modification of Electrically Conductive Fillers .....	194
6.6.4	The Effect of Molding Conditions .....	194
6.7	Conclusion and Outlook .....	195
<b>7</b>	<b>Polymer Nanocomposites and Multilayer Nanocomposite Films by Coextrusion .....</b>	<b>201</b>
	<i>Rui Jian, Joey Mead, Carol Barry, and Claire Lepont</i>	
7.1	Introduction .....	201
7.1.1	Electrical Conductivity of Polymer/Carbon Nanotube Nanocomposites .....	202

7.1.2	Electromagnetic Interference of Polymer/Carbon Nanotube Nanocomposites .....	204
7.1.3	Layer Multiplying Coextrusion Process .....	206
7.2	Experimental .....	207
7.2.1	Materials .....	207
7.2.2	Coextrusion of Multilayer Samples .....	208
7.2.3	Characterization .....	210
7.3	Results and Discussion .....	213
7.3.1	PS/CNT Compounds with Varied CNT Loadings .....	213
7.3.1.1	Electrical Resistivity of Diluted PS/CNT Compounds ..	213
7.3.1.2	Rheology of PS/CNT Compounds .....	215
7.3.1.3	Multilayer Extruded Samples .....	217
7.3.1.4	Compounds with CNT Loading Above the Percolation Region (5 wt%) .....	218
7.3.1.5	Compounds with CNT Loading Near the Percolating Region (3 wt%) .....	220
7.3.2	Foamed Sheet .....	221
7.3.2.1	Effect of Layer Multiplying on Sheet Morphology ....	221
7.3.2.2	Multilayer PS/CNT-Filled PS Foam Sheet .....	223
7.3.2.3	Effect of CNT Content on Morphology .....	225
7.3.2.4	Effect of Foaming Agent Content on Morphology .....	226
7.3.3	EMI Shielding Properties .....	227
7.4	Conclusions .....	230
<b>8</b>	<b>The Effect of Foaming on the Properties of Carbon Nanotubes/Polymer Composites .....</b>	<b>235</b>
	<i>Amir Ameli, Chul B. Park, and Petra Pötschke</i>	
8.1	Introduction .....	235
8.2	Conductive Filler/Polymer Nanocomposites (CPNs) .....	237
8.3	Foaming of CPNs .....	238
8.3.1	Gas-Melt Mixture .....	239
8.3.2	Cell-Filler Interactions .....	239
8.4	Microstructure of CPN Foams .....	241
8.4.1	Batch-Foamed CPNs .....	241
8.4.2	Foam-Injection-Molded CPNs .....	243
8.5	Electrical Conductivity of CPN Foams .....	246
8.5.1	Batch-Foamed CPNs .....	246
8.5.2	Foam-Injection-Molded CPNs .....	247
8.6	Dielectric Properties of CPN Foams .....	249
8.7	Summary .....	252

<b>9</b>	<b>The Effect of Solid-state Shear Processing on the Network Formation of Clay-based Polymer Nanocomposites</b> .....	<b>255</b>
	<i>Masami Okamoto</i>	
9.1	Introduction .....	255
9.2	Percolated Network Formation in PLSNCs .....	257
9.2.1	Nanostructure .....	257
9.2.2	Flexibility of a Single MMT Layer .....	262
9.2.3	Volume-spanning Mesoscale Network .....	263
9.3	Network Structure and Rheological Properties in PLSNCs .....	264
9.3.1	Flocculation Control and Modulus Enhancement .....	264
9.3.2	Linear Viscoelastic Properties .....	266
9.3.3	Relaxation Rate and Crystallization .....	271
9.3.4	Nonlinear Shear Response .....	274
9.3.5	Analogy to Soft Colloids .....	276
9.3.6	Reversibility of the Network Formation Process .....	276
9.3.7	Alignment of Silicate Layers in a Network .....	280
9.4	Interlayer Opening and Intercalated Nanocomposite Structure .....	284
9.5	Novel Compounding Methods for Delamination of OMLFs .....	288
9.6	Solid-state Shear Compounding .....	289
9.7	Future Prospects .....	292
<b>10</b>	<b>Orientation Development During Processing of Nanocomposite Polymers</b> .....	<b>297</b>
	<i>Samuel Kenig</i>	
10.1	Introduction .....	297
10.2	Earlier Studies Related to Flow-Induced Orientation of Elongated Particles .....	299
10.3	Orientation Modelling .....	300
10.4	Methodology .....	302
10.5	Experimental .....	302
10.5.1	Materials Processes and Mechanical Characterization .....	302
10.5.2	Shear Orientation by Parallel Plate Rheometer .....	302
10.5.3	Elongational Orientation by Melt Drawing .....	304
10.6	Results and Discussion .....	305
10.6.1	Shear Viscosity .....	305
10.6.2	Shear Orientation .....	306
10.6.3	Elongational Orientation .....	307
10.6.4	Morphology .....	308
10.7	Conclusions .....	310

<b>11 Anomalous Viscoelastic Behaviors of Polymer Nanocomposites During Shear and Extensional Deformations</b> .....	<b>313</b>
<i>Esmail Narimissa, Rahul K. Gupta, and Sati N. Bhattacharya</i>	
11.1 Introduction .....	313
11.2 Anomalous First Normal Stress Difference Behavior of PLA/NGP Nanocomposites .....	314
11.2.1 Introduction .....	314
11.2.2 Normal Force Measurements .....	315
11.3 Anomalous Uniaxial Extensional Deformation of PLA/NGP Nanocomposites .....	321
11.3.1 Introduction .....	321
11.3.2 Extensional Viscosity Measurement .....	323
11.3.3 Application of Constitutive Equations for Rheological Modeling .....	332
11.4 Temperature Causing Anomalous Shear Rheological Behavior .....	335
<b>12 Polymer Nanocomposites Based on Layered Double Hydroxides (LDHs)</b> .....	<b>343</b>
<i>Sajid Naseem, Andreas Leuteritz, and Udo Wagenknecht</i>	
12.1 Introduction to LDHs .....	343
12.2 Structural Aspects of LDHs .....	344
12.2.1 Brucite Layers .....	344
12.2.2 Cation Substitution of LDHs .....	345
12.2.3 Interlayers of LDHs .....	345
12.3 Synthesis of LDHs .....	346
12.3.1 Co-precipitation Methods .....	347
12.3.2 Anion Exchange Method (Indirect Method) .....	348
12.3.3 Calcination/Reconstruction Method (Memory Effect) .....	348
12.3.4 Other Methods .....	349
12.3.5 Summary of LDH Synthesis Methods .....	349
12.3.6 Thermal and Chemical Stabilities of Different LDHs .....	350
12.4 Applications of LDHs .....	350
12.5 Preparation of LDH/Polymer Nanocomposites .....	352
12.5.1 In-Situ Synthesis Method for Polymer Nanocomposites .....	352
12.5.1.1 In-Situ LDH Synthesis .....	352
12.5.1.2 In-Situ Polymerization .....	353
12.5.2 Solution Intercalation .....	354
12.5.3 Melt Compounding .....	356

12.5.4 Effect of Dispersion and Exfoliation of LDHs on LDH/Polymer Nanocomposites .....	358
12.5.5 Sonicated Assisted Masterbatch (SAM) Melt Mixing .....	361
12.6 Summary .....	362
<b>13 Polymer–Cellulose Nanocrystal (CNC) Nanocomposites .....</b>	<b>371</b>
<i>Davood Bagheriasl and Pierre J. Carreau</i>	
13.1 Introduction .....	371
13.2 CNC-reinforced Polymer Composites .....	373
13.3 Polymer–CNC Nanocomposite Processing Methods .....	374
13.3.1 Hydro-soluble or Hydro-dispersible Polymers .....	374
13.3.2 Non-hydro-soluble Polymers .....	375
13.3.3 In-situ Polymerization .....	375
13.3.4 Compatibilization .....	376
13.3.5 Chemical Modification .....	376
13.3.6 Solvent Casting .....	377
13.4 Effect of CNCs on the Properties of Polymers .....	377
13.4.1 Effect of CNCs on the Rheological Behavior of the Polymers ...	377
13.4.2 Small-amplitude Oscillatory Shear (SAOS) .....	378
13.4.3 Steady Shear .....	380
13.4.4 Transient Behavior .....	381
13.4.5 Structure Build-up .....	382
13.4.6 Effect of CNCs on the Mechanical and Thermal Properties of Polymers .....	383
13.4.6.1 Thermal Properties .....	383
13.4.6.2 Tensile Properties .....	384
13.4.6.3 Dynamic Thermo-mechanical Properties .....	385
13.5 Applications for Polymer–CNC Nanocomposites .....	387
13.6 Summary and Overview .....	388
<b>14 Cellulose Nanocrystals: Particles and Polymer Nanocomposites .....</b>	<b>395</b>
<i>Wissam Abdallah and Musa R. Kamal</i>	
14.1 Introduction .....	395
14.2 Cellulose and Cellulosic Particles .....	397
14.2.1 Cellulose .....	397
14.2.2 Cellulosic Nanoparticles .....	398
14.2.3 Cellulose Nanocrystals (CNC) .....	398
14.2.3.1 Extraction Processes of CNC .....	399

14.2.3.2	Properties of CNC	400
14.2.3.2.1	Mechanical Properties of CNC	400
14.2.3.2.2	Thermal Properties of CNC	401
14.2.3.2.3	Liquid Crystallinity Properties of CNC	401
14.2.3.2.4	Rheological Properties of CNC	401
14.2.3.2.5	Optical Properties of CNC	402
14.2.3.2.6	Morphological Characteristics of CNC	402
14.2.3.2.7	Effects of Drying on the Properties of CNC	403
14.3	Polymer Nanocomposites	407
14.3.1	Polymer-CNC Nanocomposites	408
14.3.1.1	General Considerations in the Synthesis of Polymer-CNC Nanocomposites	408
14.3.1.1.1	Processing Methods	408
14.3.1.1.2	Dispersion, Uniformity, and Interfacial Interactions	410
14.3.1.2	Recent Products, Processes, and Properties	413
14.3.1.2.1	Typical Polymer/CNC Nanocomposites	413
14.3.1.2.2	Improvement of Nanocomposite Mechanical Properties	414
14.3.1.2.3	Thermal Properties of CNC-filled Polymer Nanocomposites	415
14.3.1.2.4	Rheological Properties of CNC-filled Polymer Nanocomposites	417
14.3.1.2.5	Crystallization Behavior of CNC-filled Polymer Nanocomposites	421
14.3.1.2.6	Barrier Properties of CNC-filled Polymer Nanocomposites	424
14.3.1.2.7	Templating with CNC	426
14.3.1.2.8	Challenges in the Use of Polymer-CNC Nanocomposites	427
14.3.1.2.9	Water Sorption	427
14.3.1.2.10	Nanocomposite Preparation	428
14.3.1.2.11	Safety	429
<b>15</b>	<b>Processing and Properties of Carbon Nanotubes/Glass/ Epoxy Nanocomposites</b>	<b>435</b>
	<i>Ryan J. Smith, Youssef K. Hamidi, and M. Cengiz Altan</i>	
15.1	Introduction	436
15.2	Materials and Methods	441
15.2.1	Materials	441

15.2.2	Batch Preparation and Prepreg Fabrication	442
15.2.3	Sample Preparation	442
15.2.4	Mechanical Testing	443
15.2.5	Microstructural Characterization	444
15.3	Results and Discussion	444
15.3.1	Effect of Nanotube Content on Composite Microstructure	444
15.3.2	Effect of Nanotube Content on Composite Mechanical Properties	446
15.3.3	Effect of Nanotube Type on Composite Microstructure	450
15.3.4	Effect of Nanotube Type on Composite Mechanical Properties	455
15.4	Conclusions and Future Work	457
<b>16</b>	<b>Processing Influence on Thermal Conductivity of Polymer Nanocomposites</b>	<b>463</b>
	<i>Andrzej Rybak</i>	
16.1	Introduction	463
16.2	Thermal Conductivity Basics	464
16.2.1	Thermal Conductivity of Neat Polymers	464
16.2.2	Effect of Polymer Crystallinity	466
16.2.3	High Thermal Conductivity Fillers	467
16.3	Factors Affecting Thermal Conductivity	468
16.3.1	Processing Influence on Nanofiller Dispersion and Thermal Conductivity of Nanocomposites	469
16.3.2	Particle Size and Shape Effect	470
16.3.3	Effect of Nanofiller and Matrix Thermal Conductivity	472
16.3.4	Nanofiller-Matrix Interface Modification	473
16.3.5	Nanofiller Alignment	474
16.4	Thermal Conductivity of Nanocomposites	475
16.4.1	Nanocomposites with Carbon-based Fillers	475
16.4.2	Nanocomposites with Ceramic Nanofillers	476
16.4.3	Nanocomposites with Metallic Nanoparticles	477
16.5	Modeling of Thermal Conductivity	478
16.5.1	Theoretical Models	478
16.5.2	Correlation of Experimental Results with Models	482
