The Authors	V
Preface	IX
1 Equipment Overview	1
1.1 Process Issues	1
1.2 Homogeneous Melt and Composition	2
1.3 Extruder Mechanical Design Comparison	2
1.4 Extruder Screw Design/Unit Operations Comparison	6
1.5 Process Comparison	13
1.6 Equipment Overview Summary	14
2 Material Properties	17
2.1 Polymer Rheology for Extrusion	17
2.1.1 Basic Rheology Concepts	18
2.1.2 Viscosity Power-Law Dependence	20
2.1.3 Viscosity-Dependent Dissipation	21
2.2 Filler Rheology	23
2.2.1 Dissipation and the Power Law	24
2.2.2 Viscosity of Filled Polymers	26
2.3 Rheology Functions Useful for Extrusion Modeling	29
2.3.1 Viscosity Measurement	29
2.3.1.1 Cone and Plate Rheometer	29
2.3.1.2 Capillary Rheometer	31
2.3.2 Models Used in Simulation	32
2.3.3 Polymer Temperature Functions	34

2.4	Introduction to Viscoelasticity	35
2.5	Other Relevant Polymer Properties	38
2.5.1	Bulk Density	38
2.5.2	Lateral Stress Ratio	39
2.5.3	Specific Heat Capacity	40
2.5.4	Thermal Conductivity of Polymers	42
2.5.5	Melt Density	43
3	Basic Design and Polymer Flow Comparison	45
3.1	Single-Screw Extruder	45
3.1.1	Historic Literature Review	45
3.1.2	Introduction to Screw Geometry	46
3.1.3	Screw Geometric Quantitative Characteristics	47
3.1.4	Simple Flow Equations for the Metering Section	50
3.2	Co-Rotating Twin-Screw Extruder	54
3.2.1	Historic Development and Literature Review	54
3.2.2	Model Development Based on Channel Design	62
3.3	Summary	65
3.4	Nomenclature	66
4	Solids Conveying	71
4.1	Single-Screw Extruder	71
4.2	Co-Rotating Twin-Screw Extruder	75
4.3	Summary	81
5	Melting	83
5.1	Single-Screw Extruder	84
5.1.1	Single-Flighted	84
5.1.2	Barrier-Flighted	88
5.1.3	1D versus 3D Melting	91
5.2	Co-Rotating Twin-Screw Extruder	98
5.2.1	Solid-to-Melt Transition: Importance of Mechanical Deformation	102
5.2.2	Solid-to-Melt Transition: Impact of Kneading Block Geometry ..	114

5.2.3	Solid-to-Melt Transition: Influence of Process Variables, Material, and Extruder Geometry	115
5.3	Summary Comparison: Melting	123
6	Fluid Flow and Dissipation	127
6.1	Screw Fluid Dynamics Introduction	127
6.1.1	Free Helix Extruder	129
6.1.2	Pumping Effect of Screw Elements	131
6.1.3	Flow Visualization	132
6.2	Flow Analysis	133
6.2.1	Barrel Rotation Theory	133
6.2.2	Fluid Flow Screw Rotation Theory	137
6.2.3	Quantitative Screw Rotation Flow Analysis	141
6.3	Screw Rotation Energy Dissipation and Temperature Rise	145
6.3.1	Discovery of Different Dissipation for Screw and Barrel Rotation	145
6.3.2	Experimental System	146
6.4	Screw Temperature Calculation Using a Control Volume Technique ...	152
6.5	Twin-Screw Melt Transport	156
6.5.1	Screw Element: Drag Flow—Partially to Fully Filled	158
6.5.2	Screw Element: Energy Consumption	159
6.5.3	Screw Element: Combined Drag and Pressure Flow	163
6.5.4	Kneading Block: Combined Drag and Pressure Flow	168
6.5.5	Section Summary	172
7	Melt Homogenization	177
7.1	Single-Screw Extruder Melt Homogenization	177
7.1.1	Mixing and Residence Time in the Single-Screw Extruder	177
7.1.2	Single-Screw Mixing while Melting	180
7.1.3	Solid Bed Breakup	185
7.1.4	Secondary Mixing Processes and Devices	188
7.1.4.1	Maddock-Style Mixers	188
7.1.4.2	Dynamic Mixers	189

7.2	Twin-Screw Extruder Melt Homogenization	191
7.2.1	Mixing and Residence Time Distribution in the Co-Rotating Twin-Screw Extruder	191
7.2.2	Twin-Screw Mixing while Melting	195
7.2.3	Twin-Screw Mixing Downstream	196
7.2.4	Secondary Mixing Processes and Devices	205
7.2.5	Melt Homogenization: Static Mixers	207
7.3	Summary	212
	Index	215
