Preface	V
About the Author	VII
1 PVC Stabilizers	1
1.1 The Production of Polyvinyl Chloride (PVC)	1
1.2 Thermal Degradation of PVC	6
1.3 One-Packs	8
1.4 Heat Stabilizers for PVC	10
1.4.1 Metal-Free Base Stabilizers	11
1.4.2 Metal Soaps as Base Stabilizers	16
1.4.3 Tin Stabilizers	22
1.4.4 Lead Stabilizers	29
1.4.5 Rare Earth Stabilizers	33
1.4.6 Antimony and Bismuth Stabilizers	34
1.5 Costabilizers for PVC	35
1.5.1 Inorganic Costabilizers	35
1.5.2 Antioxidants	40
1.5.3 β -Diketones and Derivatives	43
1.5.4 Epoxy Compounds	46
1.5.5 Organic Phosphites	48
1.5.6 Polyols	50
1.5.7 Perchlorates	53
1.6 Guide Formulations	53
1.6.1 Additives for PVC Products in Contact with Drinking Water and Foodstuffs	53

1.6.2	Individual Guide Formulations	53
1.6.2.1	Guide Formulations for Pipes	54
1.6.2.2	Guide Formulations for Profiles	57
1.6.2.3	Guide Formulations for Sheets	60
1.6.2.4	Guide Formulations for Rigid Films	62
1.6.2.5	Guide Formulations for Cables	65
1.6.2.6	Guide Formulations for Flexible PVC Applications	69
1.6.2.7	Guide Formulations for Plastisol Applications	74
1.7	Test Methods	80
1.7.1	Mixing	81
1.7.2	Dispersibility	82
1.7.3	Production of Rolled Sheets	83
1.7.4	Rheology	84
1.7.5	Degree of Gelation	87
1.7.6	Softening Temperature	89
1.7.7	Thermostability	89
1.7.7.1	Static Thermostability	89
1.7.7.2	Dynamic Thermostability	92
1.7.8	Light Stability	95
1.7.9	Color	98
1.7.10	Gloss	100
1.7.11	Electrical Volume Resistance, Surface Resistance, and Capacitance	101
1.7.12	Fogging	103
1.7.13	Plate-Out	105
1.7.14	Shore Hardness	105
1.7.15	Impact Strength	106
1.7.16	Elongation at Break and Ultimate Tensile Strength	109
1.7.17	Pinking Test	109
1.7.18	Dry Blend Flow	110
1.7.19	LOI	111
1.8	Technical Problems with PVC Processing and Suggestions for Solutions	112

1.8.1	Plate-Out	112
1.8.2	Photo Effects	112
1.8.3	Extrusion Troubleshooting Guide	113
1.9	Stabilizer Producers	119
2	Additional PVC Additives	133
2.1	Lubricants	133
2.1.1	Introduction	133
2.1.2	Lubricants: Chemistry and Mechanisms of Action	137
2.1.3	Methods to Characterize and Test Lubricants	154
2.1.4	Lubricant Producers	155
2.2	Functional Fillers	156
2.2.1	Introduction	156
2.2.2	Fillers: Chemistry and Effects	157
2.2.3	Methods to Characterize and Test Functional Fillers	184
2.2.4	Filler Producers	185
2.3	Plasticizers	187
2.3.1	Introduction	187
2.3.2	Plasticizers: Chemistry and Mechanisms of Action	190
2.3.3	Bio-Based Plasticizers	210
2.3.3.1	Introduction	210
2.3.3.2	Drivers for the Development of Bio-Based Chemicals	211
2.3.3.3	Bio-Based Content and Labeling	211
2.3.3.4	Renewable Feedstocks for Bio-Based Plasticizers	212
2.3.3.5	Compositions of Bio-Based Plasticizers	213
2.3.4	Bio-Attributed Plasticizers	239
2.3.5	Methods to Characterize and Test Plasticizers	241
2.3.6	Plasticizer Producers	242
2.4	Titanium Dioxide	245
2.4.1	Introduction	245
2.4.2	Titanium Dioxide: Chemistry and Mechanisms of Action	246
2.4.3	Methods to Characterize and Test Titanium Dioxides	256
2.4.4	Titanium Dioxide Producers	257

2.5	Processing Aids and Impact Modifiers	257
2.5.1	Introduction	257
2.5.2	The Chemistry and Effects of Processing Aids and Impact Modifiers	258
2.5.2.1	Processing Aids or Flow Modifiers	258
2.5.2.2	Impact Modifiers	262
2.5.3	Methods to Characterize and Test Processing Aids and Impact Modifiers	279
2.5.3.1	Flow Modifiers and Processing Aids	279
2.5.3.2	Impact Modifiers	280
2.5.4	Producers of Processing Aids and Impact Modifiers	284
2.6	Chemical Blowing Agents	287
2.7	Antistatics	296
3	Uncharted Territory in PVC Processing: Plate-Out	309
3.1	Literature Review of Plate-Out	309
3.2	Plate-Out in the Venting Unit	314
3.3	Plate-Out in the Tooling and Adapter	316
3.3.1	Typical Compositions of Plate-Out from the Tooling	316
3.3.2	Laboratory Experiments	317
3.3.2.1	Introduction	317
3.3.2.2	The Influence of Moisture	319
3.3.2.3	The Influence of the Mixing Process	322
3.3.2.4	The Influence of Tooling Quality	324
3.3.2.5	The Influences of Mass Temperature, Mass Pressure and Extrusion Torque, Chalk, Titanium Dioxide, and Modifiers	324
3.3.2.6	The Influence of Lubricants and Metal Soaps	339
3.3.3	Summary for Plate-Out in Tooling and Adapter	348
3.4	Plate-Out in the Calibration	350
3.4.1	Typical Compositions of Calibration Plate-Out	350
3.4.2	Possible Mechanisms for the Formation of Plate-Out in the Calibration	350
3.4.3	Investigations of Plate-Out Formation in the Calibration	353
3.5	Troubleshooting Guide for the Prevention of Plate-Out	356

4	Uncharted Territory in the Use of PVC Products: Photo Effects	359
4.1	Literature Review of Photochemical Degradation of PVC Products	359
4.1.1	Photochemical Degradation of PVC	359
4.1.2	Degradation of PVC Phthalate Plasticizers during Weathering	366
4.2	Photobluening	367
4.2.1	Fundamental Experiments	367
4.2.2	Results and Discussion	368
4.2.2.1	Reproducibility and the Comparison of Xeno Test and Outdoor Weathering	368
4.2.2.2	Influence of the PVC Stabilizer	369
4.2.2.3	Influence of the Stabilizer Producer	371
4.2.2.4	Influence of PVC, Chalk, and the Processing Conditions	372
4.2.2.5	Influence of Modifiers and White Pigment	373
4.2.2.6	Influence of the Lattice Structure of Titanium Dioxide	374
4.2.2.7	Influence of the Titanium Dioxide Coating	375
4.2.2.8	Influence of Titanium Dioxide Levels	377
4.2.2.9	Influence of Oxygen	377
4.2.3	Conclusions and Summary for Photobluening	378
4.2.4	Outlook	379
4.3	Photopinking	379
4.4	Photograying	382
4.4.1	True Photograying	382
4.4.2	Apparent Photograying	383
4.5	Environmental Influences on the Weathering of Plastic Windows	386
4.5.1	Introduction	386
4.5.2	Rust Film	387
4.5.3	Soot	390
4.5.4	Pollen	391
4.5.5	Simulation of Environmental Effects	391
4.5.5.1	The Samples	392
4.5.5.2	A Simulation Method: The Bandol Wheel	400

4.5.5.3	Irradiation Trials without Contaminants	401
4.5.5.4	Irradiation Trials with Rust Film WJ 364 as Contaminant	403
4.5.5.5	Irradiation Trials with Soot WJ 365 as Contaminant . .	407
4.5.5.6	Irradiation Trials with Pollen as Contaminant	409
4.5.5.7	Summary of Bandol Wheel Experiments and Conclusions	413
4.5.6	Investigations by Xeno Test	414
4.5.7	Restoration	417
4.5.8	What Has Changed in Window Profiles Extrusion from 1985 to 2005: A Review	418
4.6	Chalk as Filler in u-PVC Products: New Insights into Influences on Weathering Behavior	423
4.6.1	Formation of Calcium Oxalate	424
4.6.1.1	Calcium Oxalate and Oxalic Acid: Influence on Artificial Weathering	425
4.6.1.2	Calcium Oxalate: A Product Resulting from Weathering of Plastic Window Frames?	425
4.6.1.3	Summary of Findings Regarding Oxalate Formation . .	429
4.6.2	Influence of Trace Elements in Chalk on Weathering	429
4.6.2.1	Directed Contamination by Trace Elements	429
4.6.2.2	Results of Artificial Weathering with Xeno Test	432
4.6.2.3	Summary of Investigations into the Influence of Trace Elements in Chalks on Weathering of PVC Profiles	435
4.6.3	Calcium Carbonate as Filler and the Chalking of PVC Pipes . . .	435
4.6.3.1	Materials and Methods	436
4.6.3.2	Influence on Appearance	438
4.6.3.3	Results of Outdoor Weathering	439
4.6.3.4	Conclusion and Summary	445
5	PVC and Sustainability	449
5.1	A Changing World	449
5.2	From Business to Business	450
5.3	From Business to Society	452

5.4	Chemicals in a Changing World	455
5.5	The Relevance for PVC	456
5.6	PVC in the Scientific Assessment	458
5.7	The Engagement of the European PVC Industry for Sustainable Development	460
5.8	The Sustainability Challenges Resulting from the TNS Framework	465
5.9	Biodiversity—The Sixth Challenge?	468
5.10	Schedule for a Sustainable Future	468
5.11	Do We Accept the Challenges?	474
5.12	Synergistic Progress with Vinyl 2010 and VinylPlus	475
5.13	Innovation by Progress	476
5.14	Further Advantages of Proactivity for a Sustainable Development	479
5.15	The Pedigree for PVC	482
5.16	Sustainability without Myths	488
5.17	PVC and the Future	489
5.18	Associations, Platforms, Conferences, and Publications in the PVC Industry Worldwide	490
	Index	497
