The Authors	VII
Preface	IX
1 Introduction	1
1.1 Evolution of Polymer Processing Technologies	3
1.2 The Need for Innovation in Response to Evolving Plastic Industry Demands and the Impact of Emerging Processing Technologies	5
1.3 Understanding Emerging Technologies in Polymer Processing	7
1.4 Application of Emerging Technologies in Polymer Processing	8
1.4.1 Additive Manufacturing	8
1.4.2 Microfluidics and Lab-on-a-Chip Devices	9
1.4.3 Computational Modeling and Simulation	9
1.4.4 Electrospinning	9
1.4.5 Freeze Drying and Freeze Spray Drying	9
1.4.6 Precision Injection and Compression Molding	10
1.4.7 Ultrasound-assisted Processing	10
1.4.8 Plasma Treatment Technology	10
1.4.9 Spray Coating and Spray Drying	11
1.5 Challenges Facing Implementation of Emerging Technologies in Polymer Processing	14
1.6 Conclusion and Prospects	15

2	Role of Rheology in Advanced Polymer Processing	21
2.1	Introduction	21
2.2	The Role of Rheology in Morphology Development	22
2.2.1	Polymer Blends	22
2.2.1.1	Fundamentals of Polymer Blend Morphology Development	22
2.2.1.2	The Role of Rheology	25
2.2.1.3	The Role of Extensional Rheology	30
2.2.2	Polymer Composites and Nanocomposites	32
2.2.2.1	Fundamentals of Morphology Development in Polymer Composites and Nanocomposites	32
2.2.2.2	The Role of Rheology	34
2.2.2.3	The Role of Extensional Rheology	39
2.3	Rheology as a Tool for the Evaluation of Morphology	41
2.4	Role of Rheology in Emerging Polymer Processing	44
2.4.1	Foaming	44
2.4.1.1	Fundamentals of Foaming	44
2.4.1.2	The Role of Rheology in Foaming	45
2.4.2	Electrospinning	53
2.4.2.1	Fundamentals of Electrospinning	53
2.4.2.2	The Role of Rheology in Electrospinning	54
2.4.3	Centrifugal Jet Spinning	58
2.4.3.1	The Role of Rheology in Centrifugal Jet Spinning	59
2.4.4	3D Printing	63
2.4.4.1	The Role of Rheology in 3D Printing	65
2.4.5	Micro-injection Molding	68
2.4.5.1	The Role of Rheology in Micro-injection Molding	70
2.4.6	Spray Coating	74
2.4.6.1	The Role of Rheology in Spray Coating	75
2.5	Conclusions and Future Outlook	75
3	Precision Injection Molding	95
3.1	Introduction	95
3.2	Conventional Injection Molding	98
3.2.1	Injection Molding Cycles and the Factors Affecting the Quality of the Molded Parts	98
3.2.2	Common Defects in the Injection Molded Parts	105

3.2.3	Advantages and Disadvantages of Injection Molding	113
3.2.4	Key Drivers of Markets and Restraints	113
3.2.5	Recent Trends	115
3.3	Precision Injection Molding	116
3.3.1	Factors Influencing Precision	117
3.3.2	Advances in Technologies for Precision and Accuracy of Injection Molded Products	118
3.3.2.1	Micro-injection Molding	118
3.3.2.2	Two-shot Injection Molding	120
3.3.2.3	Multi-material Molding	123
3.3.2.4	In-mold Sensing	125
3.3.2.5	3D-Printed Molds	127
3.3.2.6	Advances in Cooling Techniques	127
3.3.2.7	Real-Time Process Control with AI and Automated Quality Assurance	131
3.4	Advances in Injection Molded Lens Technology	134
3.5	Conclusions	135
4	Additive Manufacturing	145
4.1	Introduction	145
4.2	Overview of the Manufacturing Processes	146
4.3	History of Additive Manufacturing	148
4.4	Growth in Additive Manufacturing	151
4.5	Economics of Additive Manufacturing	153
4.6	Research & Development Framework	154
4.7	Additive Manufacturing Techniques	156
4.7.1	Liquid-based Additive Manufacturing	157
4.7.1.1	Stereolithography (SLA)	157
4.7.1.2	Rapid Freeze Prototyping	161
4.7.1.3	Multi-jet Modeling	161
4.7.1.4	Digital Light Processing	163
4.7.2	Solid-based Additive Manufacturing	165
4.7.2.1	Laminated Object Manufacturing	165
4.7.2.2	Direct Ink Writing or Robocasting	166
4.7.2.3	Freeze-form Extrusion Fabrication	168
4.7.2.4	Fused Deposition Modeling	168

4.7.2.5	Electron Beam Freeform (EBF)	171
4.7.2.6	Wire and Arc Additive Manufacturing	172
4.7.3	Powder-based Additive Manufacturing	173
4.7.3.1	Inkjet 3D Printing	173
4.7.3.2	Selective Laser Sintering	174
4.7.3.3	Multi-jet Fusion	175
4.7.3.4	Selective Laser Melting	176
4.7.3.5	Electron Beam Melting	178
4.7.3.6	Laser-engineered Net Shaping	179
4.7.3.7	Prometal	180
4.8	Additive Manufacturing Processes	180
4.9	Polymeric Materials for Additive Manufacturing	183
4.9.1	Polymer and Composites Used in SLA	183
4.9.2	Polymer and Composites Used in MJM	185
4.9.3	Polymer and Composites Used in DLP	188
4.9.4	Polymers and Composites Used in DIW	189
4.9.5	Polymers and Composites Used in FDM	190
4.9.6	Polymers and Composites Used in Powder-Based Sintering Processes Like MJF and SLS	199
4.10	Applications	206
4.11	Recent Trends	208
4.11.1	Sustainability	208
4.11.2	4D Printing	209
4.11.3	Micromanufacturing	210
4.11.4	Advancement and expansion of printing technology	210
4.12	Limitations of Additive Manufacturing	210
4.13	Conclusions	211
5	Electrospinning	227
5.1	Introduction	227
5.2	History	228
5.3	Fundamentals	230
5.3.1	Fluid Charging Theory	232
5.3.2	Taylor Cone Theory	233
5.3.3	Instability Theories of Jets in Flight	234

5.4	Parameters Affecting the Electrospinning Process	239
5.4.1	Solution Parameters	239
5.4.1.1	Polymer Concentration	239
5.4.1.2	Solvent Type and Properties	240
5.4.1.3	Solution Volatility	241
5.4.1.4	Polymer–Solvent Interaction	242
5.4.1.5	Polymer–Solvent Compatibility	243
5.4.1.6	Solution Conductivity	244
5.4.1.7	Surface Tension	245
5.4.1.8	Additives and Crosslinking Agents	247
5.4.1.9	Solution Temperature	248
5.4.1.10	pH Level	249
5.4.1.11	Polymer Molecular Weight	250
5.4.2	Processing Parameters	251
5.4.2.1	Applied Voltage	252
5.4.2.2	Flow Rate	252
5.4.2.3	Distance Between Spinneret and Collector	252
5.4.2.4	Solution Viscosity	252
5.4.2.5	Solution Conductivity	253
5.4.2.6	Collecting Electrode	253
5.4.2.7	Needle Tip to Collector Distance	254
5.4.2.8	Diameter of Needle Tip	255
5.4.2.9	Ambient Parameters	256
5.4.2.10	Effect of Temperature	256
5.4.2.11	Effect of Humidity	256
5.5	Polymers Suitable for Electrospinning	257
5.6	Advanced Electrospinning Systems	259
5.6.1	Side-by-side Electrospinning	259
5.6.2	Coaxial and Tri/Multi-axial Electrospinning	261
5.6.3	Multi-needle Electrospinning (Modifications for Increased Throughput)	263
5.6.4	Needleless Electrospinning	264
5.6.5	Electrospinning with Controlled Atmosphere	266
5.6.6	Magnetically Assisted Electrospinning	267
5.6.7	Near-field Electrospinning	269

5.6.8	3D Electrospinning (3D ES)	270
5.6.9	Bubble Electrospinning	272
5.6.10	Free-surface Electrospinning	273
5.7	Characterization of Electrospun Fibers	275
5.7.1	Scanning Electron Microscopy	275
5.7.2	Transmission Electron Microscopy	276
5.7.3	Atomic Force Microscopy	277
5.7.4	Fourier-transform Infrared Spectroscopy	278
5.7.5	X-Ray Diffraction	279
5.7.6	Thermal Analysis	280
5.7.6.1	Differential Scanning Calorimetry	280
5.7.6.2	Thermogravimetric Analysis	281
5.7.7	Nuclear Magnetic Resonance	282
5.7.8	Mechanical Testing	283
5.7.8.1	Tensile Testing	283
5.7.8.2	Hardness Testing	284
5.7.8.3	Fracture Analysis	286
5.7.8.4	Compression Testing	286
5.7.8.5	Impact Testing	288
5.7.8.6	Bending Behavior	288
5.7.8.7	Fatigue Testing	288
5.7.9	Contact Angle Measurement	289
5.7.10	Porosity	290
5.7.10.1	Liquid Displacement Technique	290
5.8	Electrospraying	292
5.9	Applications of Electrospun NFs	294
5.9.1	Tissue Scaffold Engineering	294
5.9.2	Drug Delivery	295
5.9.3	Enzyme Immobilization	296
5.9.4	Wound Dressing	297
5.9.5	Electromagnetic Interference Shielding	298
5.9.6	Micro-robotics	300
5.10	Modeling and Simulation of Electrospinning	301

5.11	Challenges and Prospects	306
5.11.1	Challenges	306
5.11.2	Prospects	307
5.12	Conclusions	308
6	Nanofiber Fabrication Technology	317
6.1	Introduction	317
6.2	Technological History of Microfibers and Nanofibers	318
6.3	Strategies for Making NFs	321
6.3.1	Top-down Approaches	324
6.3.1.1	Electrospinning	324
6.3.1.2	Template-assisted Synthesis	325
6.3.1.3	Drawing	326
6.3.1.4	Hydrolysis (Chemical/Enzymic)	329
6.3.1.5	Cryocrushing	331
6.3.1.6	Grinding/Homogenization	332
6.3.1.7	Steam Explosion	333
6.3.1.8	Other methods	335
6.3.2	Bottom-up Approaches	336
6.3.2.1	Phase Separation	336
6.3.2.2	Centrifugal Spinning	338
6.3.2.3	Freeze-Drying	340
6.3.2.4	Self-assembly	341
6.3.2.5	Chemical Vapor Deposition	342
6.3.2.6	Physical Vapor Deposition	343
6.3.2.7	Molecular Beam Epitaxy	344
6.3.2.8	3D Printing-Assisted Technique	345
6.4	Applications of Polymer NFs	347
6.5	Challenges and Future Perspectives	352
6.5.1	Challenges	353
6.5.2	Future Perspectives	353
6.6	Conclusion	354
7	Ultrasound-assisted Processing	365
7.1	Introduction	365

7.2	Use of Ultrasound in Polymer Processing Operations	366
7.2.1	Processing of Multiphase Polymeric Materials	366
7.2.2	Foaming	372
7.2.3	3D Printing	378
7.3	Conclusions and Future Outlook	387
8	Plasma Treatment Technology	391
8.1	Introduction	391
8.2	Fundamentals of Plasma Treatment Technology	392
8.3	Uses of Plasma Treatment Technology in Polymer Processing	394
8.3.1	Controlled Surface Wettability	394
8.3.2	Increased Printability	397
8.3.3	Bonding Between Polymer Substrates	400
8.3.4	Increased Interfacial Adhesion in Polymer Composites	401
8.4	Conclusions and Future Outlook	402
9	Nanocellular Processing	407
9.1	Introduction	407
9.2	Fundamentals of Polymer Foams and Foam Manufacturing Techniques ...	408
9.2.1	Batch Foaming	409
9.2.2	Extrusion Foaming	410
9.2.3	Foam Injection Molding	410
9.3	Thermal Insulation of Polymer Foams	410
9.4	Nanocellular Foams and Their Properties	414
9.5	Conclusions and Future Outlook	428
10	AI-Enabled Polymer Processing Technology	433
10.1	Introduction	433
10.2	Fundamentals of AI and Techniques in Polymer Processing	434
10.2.1	Machine Learning Techniques	436
10.2.1.1	Polymer Genome Database (PGDB)	436
10.2.1.2	National Institute of Standards and Technology Polymer Genome	436
10.2.1.3	Polymer Property Predictor Database	436
10.2.1.4	NanoMine Database	437
10.2.1.5	Chemical Reaction Database	437
10.2.1.6	PolyProc	438

10.2.1.7	AI plus Polymers	438
10.2.1.8	Dortmund Database	438
10.2.1.9	Polymer Informatics and Integrated Manufacturing ...	439
10.2.1.10	CROW Polymer Properties Database	439
10.2.1.11	Material Properties Database	440
10.2.1.12	PolyInfo	440
10.2.1.13	Khazana	441
10.2.1.14	Cambridge Crystallographic Database	441
10.2.1.15	CoPolDB	441
10.2.1.16	Summary of Approaches	442
10.2.2	Supervised Learning	443
10.2.2.1	Unsupervised Learning	444
10.2.2.2	Reinforcement Learning	452
10.2.3	Neural Networks	453
10.2.3.1	Basic Structure and Functioning	454
10.2.3.2	Data Preprocessing and Feature Engineering in NNs ...	457
10.3	Applications of AI in Polymer Processing	458
10.4	Case-studies and Practical Implementations	462
10.4.1	Predictive Maintenance	462
10.4.2	Quality Control	464
10.4.3	Process Optimization	466
10.4.4	Material Discovery	468
10.4.5	Energy Efficiency	469
10.4.6	Material Characterization, Selection, and Defect Detection in Polymer Products	471
10.5	General Challenges, Future Directions, and Emerging Trends	473
10.5.1	General Challenges	474
10.5.2	Future Directions	474
10.5.3	Emerging Trends	475
10.5.3.1	Generative AI for Polymer Design	475
10.5.3.2	eXplainable AI (XAI) in Polymer Processing/Synthesis ...	475
10.5.3.3	Edge AI for in-situ Monitoring	476
10.5.3.4	Collaborative AI Platforms	476
10.5.3.5	Predictive Modeling AI	476
10.6	Conclusion	477

11	Fabrication of Microfluidic Devices	485
11.1	Introduction	485
11.2	Motivation Behind Microfluidic Technology	486
11.3	Fabrication of Polymer-Based Microfluidic Devices	488
11.3.1	Lithography	488
11.3.2	Molding	490
11.3.2.1	Replica Molding	490
11.3.2.2	Hot Embossing	492
11.3.2.3	Micro-Injection Molding	496
11.3.3	Laser Ablation	505
11.3.4	3D Printing	509
11.3.5	Sealing	510
11.4	Conclusions and Future Outlook	511
12	Spray Coating	519
12.1	Introduction	519
12.2	Fundamental Principles	520
12.2.1	Fluid Atomization	520
12.2.2	Drop Evaporation in Flight	524
12.2.3	Drop Impact	524
12.2.4	Drying	524
12.3	Categories of Spray Coating	525
12.3.1	Cold Spray Coating	525
12.3.2	Plasma Spray Coating	529
12.3.2.1	Methods Based on Plasma Generation	531
12.3.2.2	Methods Based on Feedstock Material	535
12.3.2.3	Methods Based on Application Process	539
12.3.3	Conventional Thermal Spray Coating	542
12.3.3.1	Combustion/Flame Spraying	542
12.3.4	Wire Arc Spraying	545
12.3.5	Ultrasonic Spray Deposition	547
12.3.6	Electron Beam Lithography-enabled Ultrasonic Spray Coating	550
12.3.7	Summary	551
12.3.8	Electrospraying (ESP)	552
12.3.8.1	Advantages of ESP Coating	553

12.3.8.2	Varieties of ESP Methods	554
12.3.8.3	Factors Influencing the ESP Process	554
12.4	Applications of Spray Coating	560
12.4.1	Biomedical Applications	561
12.4.2	Polymeric Solar Cells	562
12.4.3	MEMS Fabrication	566
12.4.4	Microneedle Array Coating	569
12.4.5	Fabrication of Polymer-Coated Particles for Enhanced Performance	573
12.4.6	Active Catalytic Surfaces	576
12.4.7	Anti-icing and Fogging	578
12.4.8	Anti-microbial Surfaces	582
12.4.9	Protective Coatings	583
12.5	Conclusion, Current Challenges, and Prospects	584
13	Freeze Drying, Spray Drying, and Spray Freeze Drying	605
13.1	Introduction	605
13.2	Freeze Drying	607
13.2.1	Freezing Theory	609
13.2.2	Regulation of Freezing	612
13.2.2.1	Spray Freezing into Liquid	612
13.2.2.2	Drying Process	613
13.3	Spray Drying	614
13.3.1	Electrospraying	615
13.3.2	Nano Spray Drying	616
13.3.3	Electrostatic Spray Drying	619
13.4	Spray Freeze Drying	621
13.5	Applications	624
13.5.1	Applications of Conventional Freeze Drying	624
13.5.2	Applications of Spray Freeze Drying	625
13.5.2.1	Porous Systems From Aqueous Solutions	626
13.5.2.2	Porous Systems From Aqueous Colloidal Suspensions ...	627
13.5.3	Applications of Nano Spray Drying	628
13.6	Restrictions	631
13.6.1	Spray Drying	631
13.6.2	Freeze Drying	632
13.6.3	Spray Freeze Drying	633

13.7 Outlook and Opportunities	633
13.7.1 Spray Drying	633
13.7.2 Freeze Drying & Spray Freeze Drying	635
13.8 Conclusions	636
Index	641
