Acknowledgement VII

Preface XVII

1 Background 1
1.1 Plastics Industry Review 1
1.1.1 Manufacturing Productivity 1
1.1.2 Manufacturing Cost Breakdown 4
1.1.3 Characteristics of Productive Plastics Manufacturers 6
1.2 Manufacturing and Strategic Planning 8
1.2.1 Manufacturing Planning 8
1.2.2 Manufacturing System Design 11
1.2.3 Strategic Planning 13
1.3 Engineering Economics 16
1.3.1 Payback Period 18
1.3.2 Net Present Value 18
1.3.3 Internal Rate of Return 20
1.4 Summary 22

2 Plastics Manufacturing Systems 25
2.1 Overview of Plastics Processing 25
2.1.1 Extrusion 26
2.1.2 Blow Molding 27
2.1.3 Injection Molding 28
2.1.4 Thermoforming 29
2.2 Characteristics 30
2.2.1 Closed Loop Control 30
2.2.2 Open Loop Control 32
2.2.3 Dynamic Control 34
2.2.4 Control Modes 35
2.2.5 Control Architectures 37
2.2.6 Automatic Control 39
2.3 Performance Measurement 40
2.3.1 Dynamic Response 41
2.3.2 Repeatability 42
2.3.3 Productivity 44
2.4 Summary 46

3 Heating and Cooling 47
3.1 Specifications 47
3.1.1 Power Output 48
3.1.2 Actuator Efficiency 49
3.1.3 Linearity 50
3.1.4 Consistency 51
3.1.5 Failure Rate and Mode 52
3.1.6 Cost 53
3.1.7 Operating Requirements 54
3.2 Heating 56
3.2.1 Conduction Heaters 57
3.2.2 Radiant Heaters 61
3.2.3 Heater Controls 64
3.3 Cooling 68
3.3.1 Coolants 68
3.3.2 Coolant Temperature Controllers 70
3.4 Transient Analysis 73
3.4.1 Lumped Thermal Capacitance 73
3.4.2 Finite Thickness Model 78
3.5 Summary 82

4 Hydraulics and Pneumatics 85
4.1 Specifications 86
4.2 Pumps and Compressors 88
4.2.1 Gear Pump 90
4.2.2 Vane Pump 91
4.2.3 Piston Pump 92
4.3 Fluid Conditioning 94
4.3.1 Filters 94
4.3.2 Heat Exchangers 96
4.3.3 Accumulators 97
4.3.4 Relief Valves 99
4.3.5 Pressure Regulators 100
4.4 Actuators 102
4.4.1 Cylinders 102
4.4.2 Motors 106
4.5 Control Valves 108
4.5.1 Directional Valves 111
4.5.2 Metering Valves 112
4.6 Dynamic Analysis 116
4.6.1 Valve Dynamics 116
4.6.2 Fluid Dynamics 118
4.6.3 Machine Dynamics 121
4.7 Summary 123

5 Electric Drives 125
5.1 Introduction 125
5.1.1 Electromagnetism 125
5.1.2 Electromotive Forces 127
5.1.3 Common Motor Types 128
5.1.4 Typical Specifications 129
5.2 Linear Solenoids 130
5.3 DC Motors 133
5.3.1 DC Brushed Motors 133
5.3.2 DC Brushless Motor 134
5.3.3 Analysis 135
5.3.4 DC Motor Controls 138
5.4 AC Induction Motors 140
5.4.1 Design 141
5.4.2 Analysis 142
5.4.3 Behavior 145
5.4.4 AC Motor Controls 147
5.5 Other Motors 149
5.5.1 Stepper Motors 149
5.5.2 Linear Motors 152
5.6 Motor Specification Guidelines 153
5.7 Summary 155

6 Process Sensors 157
6.1 Specifications 157
6.1.1 Sensitivity, Responsivity, and Resolution 157
6.1.2 Response Time 159
6.1.3 Precision and Accuracy 161
6.1.4 Linearity and Hysteresis 162
6.1.5 Range 165
6.1.6 Life Expectancy 166
6.1.7 Size 167
6.1.8 Calibration 168
6.2 Temperature Sensors 169
6.2.1 Thermocouples 169
6.2.2 Resistance Temperature Detectors 172
6.2.3 Infrared Pyrometers 173
6.3 Force and Pressure Sensors 175
6.3.1 Strain Gages 175
6.3.2 Load Cells 177
6.3.3 Pressure Transducers 179
6.4 Displacement Sensors 182
6.4.1 Resistive Sensors 183
6.4.2 Inductance Sensors 184
6.4.3 Magnetostrictive Sensors 185

6.4.4 Optical Encoders . . . 186
6.4.5 Laser Interferometers . . . 187
6.5 Summary . . . 187

7 Signal Conditioning . . . 189
7.1 Conversion . . . 189
7.1.1 Resistance to Voltage . . . 189
7.1.2 Bridge Circuits . . . 190
7.1.3 Current to Voltage . . . 195
7.2 Amplification . . . 196
7.2.1 Operational Amplifiers . . . 198
7.2.2 Unity Amplifier . . . 200
7.2.3 Gain Adjustment . . . 201
7.2.4 Bias Adjustment . . . 204
7.3 Filtering . . . 206
7.3.1 Passive Filters . . . 209
7.3.2 Active Filters . . . 214
7.4 Signal Conditioning in Software . . . 218
7.4.1 Calibration . . . 219
7.4.2 Software Filters . . . 222
7.4.3 Linearization . . . 227
7.5 Summary . . . 230

8 Data Acquisition Systems . . . 233
8.1 Overview . . . 233
8.2 Analog to Digital Conversion . . . 236
8.2.1 Resolution . . . 237
8.2.2 Range . . . 243
8.2.3 Sampling Frequency . . . 245
8.2.4 Bandwidth . . . 249
8.2.5 Buffer Size . . . 250
8.2.6 Single-Ended and Differential Signaling . . . 251
8.2.7 Input Impedance . . . 253
8.2.8 Slew Rate . . . 254
8.2.9 Thermocouple Input Modules . . . 255
8.3 Analog Output Modules . . . 256
8.4 Digital Input/Output Modules . . . 258
8.5 Summary . . . 260

9 Machine Controllers . . . 263
9.1 System Architectures . . . 264
9.1.1 PLC/PAC Controllers . . . 264
9.1.2 PC/PLC Controllers . . . 271
9.1.3 Virtual Controllers . . . 274
9.1.4 Distributed/Embedded Microcontrollers . . . 276
9.1.5 Summary . . . 278

9.2 Implementation 279
9.2.1 Control Architecture 279
9.2.2 Control Cabinet 280
9.2.3 Auxiliary Modules 282
9.2.4 System Operation 285
9.3 Summary 288

10 Process Control 289
10.1 Open Loop Control 290
10.2 Thermostat Control 293
10.3 PID Control 296
10.3.1 Proportional Control 296
10.3.2 Integral Control 298
10.3.3 Proportional-Integral (PI) Control 300
10.3.4 Proportional-Integral-Derivative (PID) Control 300
10.4 Common Issues 303
10.4.1 Saturation 303
10.4.2 Electrical Noise 305
10.4.3 Filters 306
10.4.4 Delays 308
10.5 Additional Topics 310
10.5.1 Tuning Methodology 311
10.5.2 Analog Implementation 315
10.6 Summary 318

11 Process Characterization 321
11.1 Statistical Characterization 322
11.1.1 Mean and Range 323
11.1.2 Standard Deviation 324
11.1.3 Coefficient of Variation 325
11.2 Design of Experiments 326
11.2.1 Full and Fractional Factorial Designs 327
11.2.2 Advanced Designs 332
11.3 Best Practices in Experimentation 335
11.3.1 Center-Points 335
11.3.2 Population Size 337
11.3.3 Characterization Range 341
11.3.4 Grouping and Randomization 342
11.3.5 Stabilization 343
11.4 Regression 345
11.4.1 Linear Least Squares 345
11.4.2 Outlier Analysis 347
11.4.3 Correlation Coefficient 348
11.4.4 Confidence Intervals 349
11.5 Summary 351

12 Process Optimization 353
12.1 Process Capability Assessment 354
12.1.1 Yield Estimates 354
12.1.2 Process Capability Indices, C_P and C_{PK} 355
12.1.3 Six Sigma 357
12.2 Process Feasibility Analysis 359
12.2.1 Monte Carlo Analysis 361
12.2.2 Constraint Based Reasoning 364
12.3 Process Optimization 369
12.3.1 Robustness and Yield 371
12.3.2 Cost Minimization 376
12.3.3 Pareto Optimality 379
12.4 Uncertainty 382
12.5 Summary 384

13 Quality Control 387
13.1 Gage Repeatability & Reproducibility 388
13.2 Acceptance Sampling 392
13.3 On-Line Metrology 395
13.3.1 Rheometry 396
13.3.2 Dimensional Metrology 398
13.3.3 Machine Vision 400
13.3.4 Weight 403
13.4 Statistical Process Control 405
13.4.1 Implementation 405
13.4.2 SPC Heuristics 408
13.4.3 Multivariate Statistical Process Control 410
13.5 Summary 416

14 Automation 419
14.1 Introduction to Automation 419
14.1.1 Advantages and Disadvantages 419
14.1.2 Plastics Factory Automation Systems 420
14.2 Raw Materials Handling 422
14.2.1 Loading 424
14.2.2 Drying 425
14.2.3 Gravimetric Blending 426
14.2.4 Granulation 428
14.3 Robotics 430
14.3.1 Sprue Pickers 430
14.3.2 Traversing Robots 432
14.3.3 SCARA Robot 433
14.3.4 Fully Articulated Robots 434
14.3.5 End of Arm Tooling 435

14.4 Finished Goods Handling 438
14.4.1 Conveyors 438
14.4.2 Part Sorters 439
14.4.3 Pallet Loader 441
14.4.4 Automated Guided Vehicle 442
14.5 Integrated Systems 443
14.5.1 Strategy 443
14.5.2 Examples 445
14.6 Summary 450

Appendix A: Statistical Labor Data 453
A.1 United States Labor Rates 453
A.2 International Labor Rates 454
A.3 Trends in International Manufacturing Costs 455

Appendix B: Material Properties 456

Appendix C: Unit Conversions 457
C.1 Length Conversions 457
C.2 Mass/Force Conversions 458
C.3 Pressure Conversions 458
C.4 Flow Rate Conversions 458
C.5 Viscosity Conversions 459
C.6 Power Conversions 459
C.7 Energy Conversions 459

Appendix D: Matlab Primer 460
D.1 Usage 460
D.2 Sample Program 461
D.3 Other Functions/Operators 463
